——

Summary:

Aspiring Data Scientist with a strong foundation in machine learning, data analysis, and statistical modeling, coupled with a passion for problem-solving and innovation. Proficient in Python, data manipulation, and building insightful models to solve real-world challenges. Highly interested in Data Science, Machine Learning, Generative AI, and exploring opportunities in web development and startups. Seeking to contribute to the growth of an organization through impactful, data-driven solutions.

——

Education:

BS in Data Science (7th Semester) DHA Suffa University,
Expected Graduation: July-2026

——

Skills:
Programming Languages:

- Python (NumPy, Pandas,
- Matplotlib, Scikit-learn,NLTK,Spacy)
- C
- Java
- Javascript
- PHP
- HTML
- CSS

——

Tools:

- WEKA,
- Jupyter Notebook,
- VS Code,
- PyCharm,
- Intellji Idea,
- Anaconda
- Excel
- Power BI/Looker Studio

Certifications :

- Get Started with Python
- Foundations of Data Science
- Google AI Essentials
- Supervised Machine Learning: Regression and Classification
- Programming with JavaScript
- Foundations: Data, Data, Everywhere
- Introduction to Front-End Development
- Building Web Applications in PHP
- Complete A.I. & Machine Learning, Data Science Bootcamp

Experience / Projects:

Project 1:

Heart Disease Prediction

Project 2:

Credit Card Fraud Detection

I have worked on many other Projects Through out my courses like Building a .NET application using ML/DL for customer churn prediction/House Price prediction ,some front-end related projects like making a ui for website and I have also worked on Power BI/Looker Studio by google to build Dashboards know basics of Amazon Web Server (EC2 instance/S3 Bucket)
